BUSINESS INSIGHTS

1. High-Level Sales Performance

Overall Metrics: The establishment generated \$64,180 in total revenue across 1,661 total orders, selling 3,890 pizzas.

Customer Purchasing Power: The average order value is \$38.64, with customers typically purchasing 2.32 pizzas per order

2. Operational & Staffing Optimization

Peak Hours: Order volume consistently spikes during two distinct periods: the lunch rush (12:00 PM – 1:00 PM) and the dinner rush (4:00 PM – 6:00 PM). Staffing and inventory preparation should be heavily scaled around these specific windows to maintain service speed.

Daily Trends: While the textual insights indicate weekends (Friday/Saturday evenings) are traditionally busy, the primary bar chart shows substantial mid-week volume peaks on Tuesday (301 orders) and Wednesday (290 orders). Promotional efforts could be targeted at slower days like Thursday (179 orders) to balance weekly revenue.

3. Product & Menu Strategy

Category Leaders: The Classic pizza category is the dominant revenue driver, accounting for the maximum share of sales (27.79%). Supreme, Chicken, and Veggie categories perform similarly to one another, each contributing between 23% and 25%.

Size Preferences: Customers overwhelmingly prefer Large pizzas, which generate nearly half (46.55%) of total sales. Medium (29.54%) and Regular (22.32%) make up the remainder of standard orders, while XL and XXL sizes are practically negligible (combined <2%), suggesting a potential opportunity to consolidate inventory by phasing out oversized boxes and dough allocations.

Menu Optimization: The Classic Deluxe and Thai Chicken pizzas are top-tier performers and should feature prominently in marketing. Conversely, the Brie Carre and Soppressata pizzas are the lowest-selling items. The business should evaluate the ingredient costs of these bottom 5 pizzas to determine if they should be removed from the menu entirely.
